

IN THE CLAIMS

Claim 1 (currently amended): A convenience roll ~~as defined herein~~ in the form of an elongate web of material comprising a multiplicity of individual portions integrally connected together in series, with the elongate web having an overall width, with each of the multiplicity of individual portions having a length along the elongate web, wherein each individual portion is shaped so as to have an area that is less than ~~[[the]]~~ a product of ~~[[its]]~~ the overall width across the elongate web multiplied by ~~[[its]]~~ the length along the elongate web, and wherein neighbouring individual portions are connected together by a frangible zone of material whose width across the elongate web is small relative to the overall width of the elongate web whereby to act as a controlled breaking point for when ~~[[an]]~~ one of the multiplicity individual ~~portions~~ ~~portion~~ is to be separated from ~~its neighbour~~ neighbouring individual portions on dispensing.

Claim 2 (currently amended): A convenience roll as claimed in claim 1 wherein said frangible zone has a width across the elongate web of less than half the overall width of the elongate web.

Claim 3 (currently amended): A convenience roll as claimed in claim 1 ~~or claim 2~~ wherein said frangible zone is in the form of a single strip of material in ~~[[the]]~~ a middle section of the web.

Claim 4 (currently amended): A convenience roll as claimed in ~~any preceding~~ claim 1 wherein the elongate web is folded into the form of a stack of individual portions for dispensing.

Claim 5 (currently amended): A convenience roll as claimed in claim 4 wherein the elongate web is folded at the frangible zones between neighbouring individual portions.

Claim 6 (currently amended): A convenience roll as claimed in claim 4 ~~or claim 5~~ wherein each individual portion is folded.

Claim 7 (currently amended): A convenience roll as claimed in ~~any preceding~~ claim 4 wherein the individual portions each have a generally circular shape.

Claim 8 (currently amended): A convenience roll as claimed in claim 7 wherein the individual portions are folded about ~~their~~ a diameter of the generally circular shape to produce a stack with a generally semi-circular shaped section.

Claim 9 (original): A convenience roll as claimed in claim 8 wherein the individual portions are folded about a plurality of radially extending fold lines to produce a stack with a quadrant-shaped section.

Claim 10 (original): A convenience roll as claimed in claim 8 wherein the individual portions are folded about a plurality of radially extending fold lines in a fan-like pattern.

Claim 11 (canceled).

Claim 12 (currently amended): A dispenser containing a convenience roll as claimed in **any preceding claim 1**.

Claim 13 (currently amended): A dispenser containing a convenience roll as claimed in claim 8, ~~claim 9 or claim 10~~ and having two or more separate compartments each for holding a stack.

Claim 14 (currently amended): A dispenser as claimed in claim 13 wherein one **of the two or more separate compartments** ~~compartment~~ holds a dry stack and ~~the other~~ **another of the two or more separate compartments** holds a moist or wet stack.

Claim 15 (currently amended): A convenience roll comprising an elongate web of material defining a plurality of individual portions integrally connected together in series, wherein each individual portion has a width across the **elongate** web and a length along the **elongate** web and is shaped so as to have an area that is less than said width multiplied by said length, and wherein said individual portions are connected by respective frangible zones having a width across the **elongate** web that is small relative to said width of the **elongate** web so as to act as controlled breaking points between the respective individual portions.

Claim 16 (canceled).

Claim 17 (new): A convenience roll as claimed in claim 2 wherein said frangible zone is in the form of a single strip of material in a middle section of the web.

Claim 18 (new): A convenience roll as claimed in claim 1 wherein the individual portions each have a generally circular shape.

Claim 19 (new): A convenience roll as claimed in claim 18 wherein the individual portions are folded about a diameter of the generally circular shape to produce a stack with a generally semi-circular shaped section.

International Appln. No.: PCT/GB2004/001653
Oday Abbosh et al.

Claim 20 (new): A convenience roll as claimed in claim 18 wherein the individual portions are folded about a plurality of radially extending fold lines to produce a stack with a quadrant-shaped section.

Claim 21 (new): A convenience roll as claimed in claim 18 wherein the individual portions are folded about a plurality of radially extending fold lines in a fan-like pattern.

Claim 22 (new): A dispenser containing a convenience roll as claimed in claim 19 and having two or more separate compartments each for holding the stack.
